

Evaluation of Tropical Cyclone Forecasts with the GFDL FV3 Dynamical Core

Morris Bender, Jan-Huey Chen, Matthew Morin and Shian-Jiann Lin

Experimental Design

- Version of FV3 used in this study has same horizontal resolution (~13km) and vertical resolution as current operational GFS.
- GFDL 6-Species Micro-Physics package was implemented into version of FV3 dynamical core in this study (*replaces simple Zhao-Carr operational in the GFS*).
- 2015 and 2016 Tropical Cyclone seasons analyzed for the Atlantic, East Pacific and West Pacific Basin (*total of 1,337 forecasts*).
- All forecasts initiated from May 1st through December 1st, initialized at 0 and 12 z synoptic times using the operational GFS initial conditions.
- Verifications use early guidance unless otherwise indicated, to reproduce operations as closely as possible.

Early Model Track Guidance

Atlantic Basin

East Pacific Basin

**FV3 & GFS track errors comparable at all forecast lead times.
FV3 & GFS track errors larger than ECMWF beyond day 2.**

Early Model Track Guidance

West Pacific Basin

2015 & 2016 WEST PACIFIC SEASONS (EARLY)

NUMBER OF CASES: (487, 442, 403, 366, 293, 228, 176)

Combined Basins

2015 & 2016 ATLANTIC, EAST PACIFIC, WEST PACIFIC

NUMBER OF CASES: (1203, 1089, 987, 886, 693, 538, 409)

**FV3 track errors reduced 6% compared to the GFS at days 2-5.
FV3 track errors still significantly larger than ECMWF**

Impact using ECMWF Initial Condition for Joaquin (0z only)

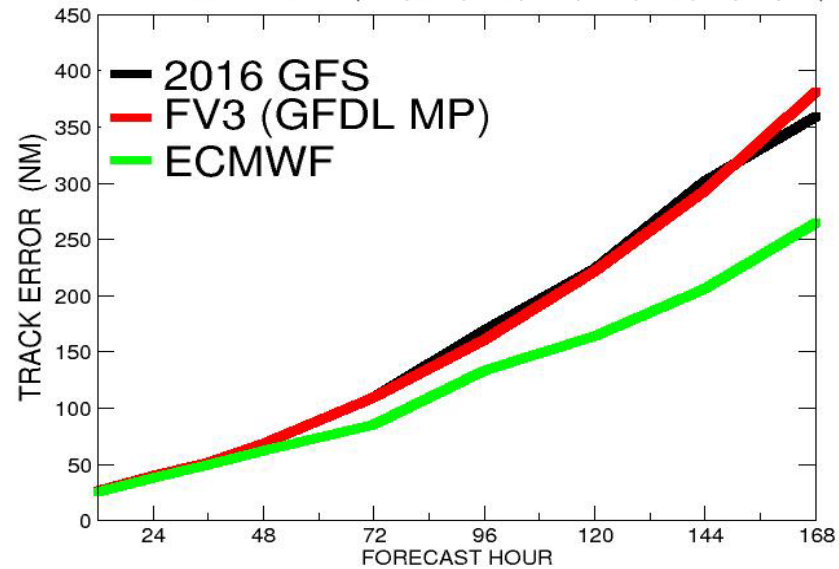

FV3 & ECMWF track errors using the ECMWF Initial condition comparable through 96 h.

Suggest improved DA and quality control in the GFS global model is needed to become competitive with the ECMWF for TC track prediction !

7 Day Track Guidance (Late)

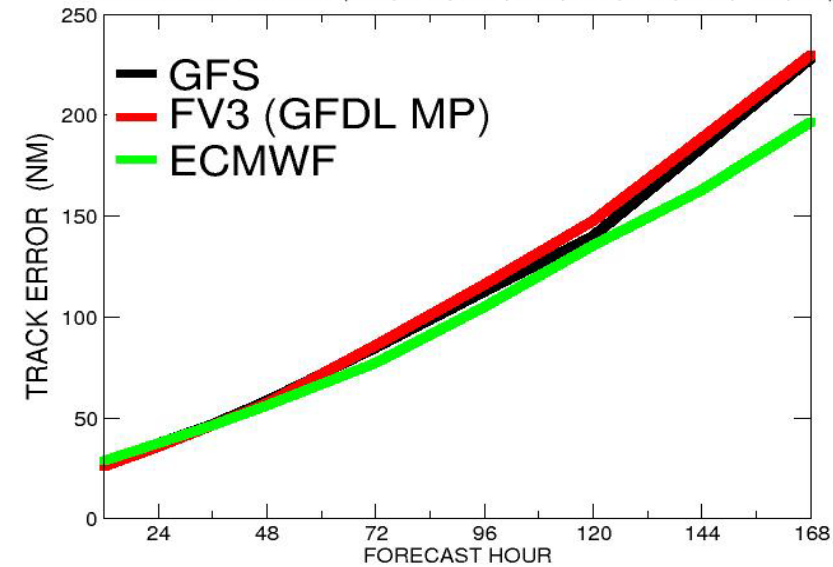

2015 & 2016 ATLANTIC SEASONS

NUMBER OF CASES: (268, 242, 216, 191, 144, 113, 86, 64, 45)

2015 & 2016 EASTERN PACIFIC SEASONS

NUMBER OF CASES: (459, 413, 371, 330, 259, 201, 153, 112, 79)

2015 & 2016 WESTERN PACIFIC SEASONS

NUMBER OF CASES: (517, 470, 426, 386, 313, 248, 194, 149, 110)

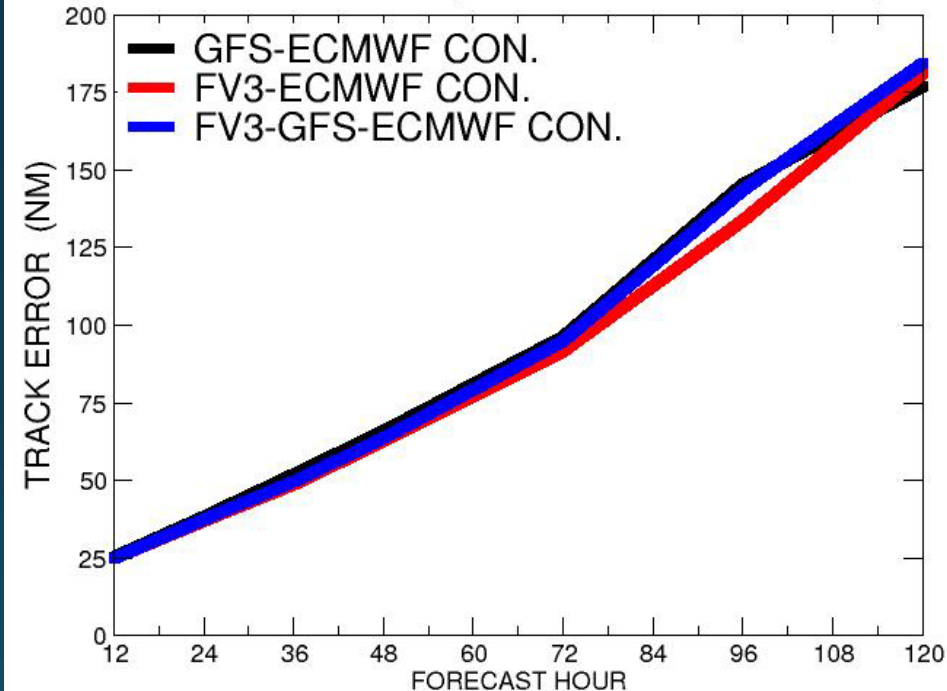

Track errors of FV3 and GFS very comparable in the longer forecast lead times.

ECMWF track forecasts remain much more skillful at days 6 and 7, particularly in the Atlantic and West Pacific.

Impact of FV3 Track Guidance on Model Consensus

2015 & 2016 ATLANTIC CONSENSUS
NUMBER OF CASES: (262, 236, 212, 188, 142, 109, 82)

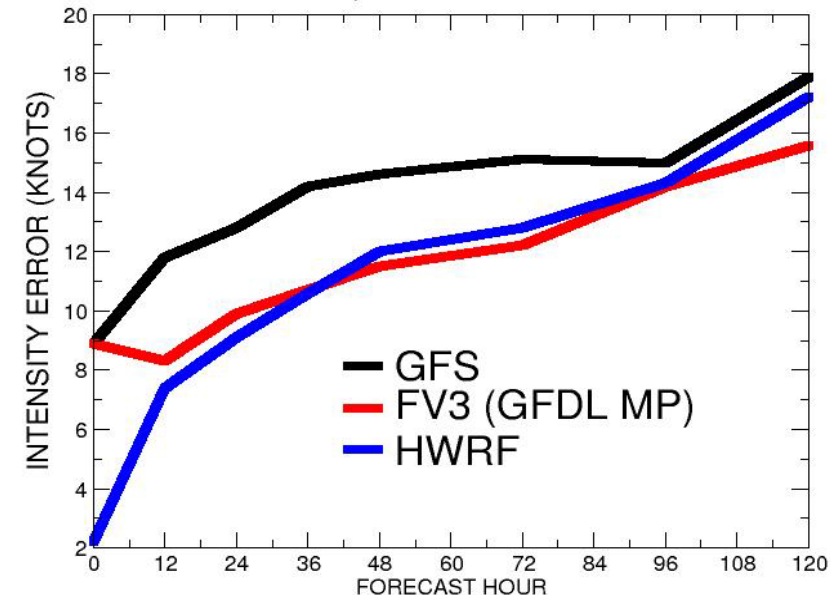

2015 & 2016 EASTPAC CONSENSUS
NUMBER OF CASES: (451, 407, 366, 328, 255, 196, 148)

Replacement of the FV3 or addition of the FV3 in the GFS-ECMWF model consensus leads to a neutral impact on forecast track error.

Late Model Intensity Guidance

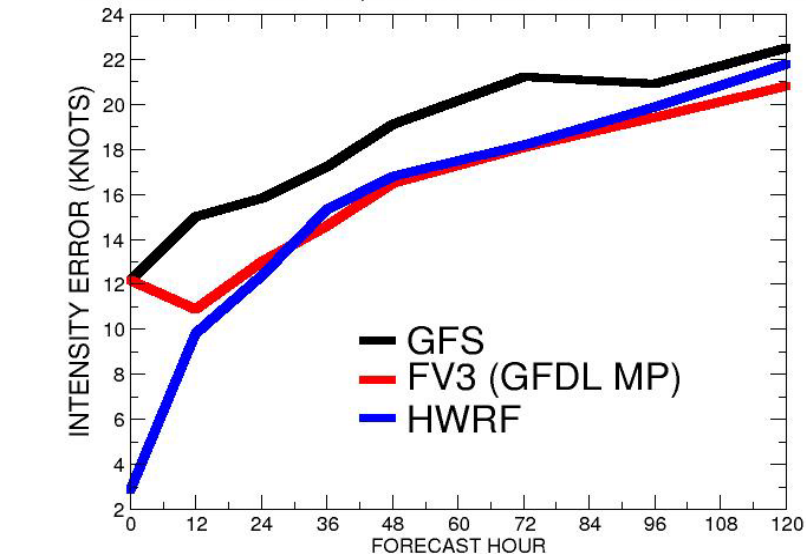

2015 & 2016 ATLANTIC SEASONS (LATE GUIDANCE)
 NUMBER OF CASES: (295, 268, 242, 216, 190, 144, 114, 86)

2015 & 2016 EAST PACIFIC SEASONS (LATE GUIDANCE)
 NUMBER OF CASES: (494, 459, 413, 373, 332, 259, 202, 152)

2015 & 2016 WEST PACIFIC SEASONS (LATE GUIDANCE)
 NUMBER OF CASES: (548, 507, 464, 423, 383, 308, 244, 191)

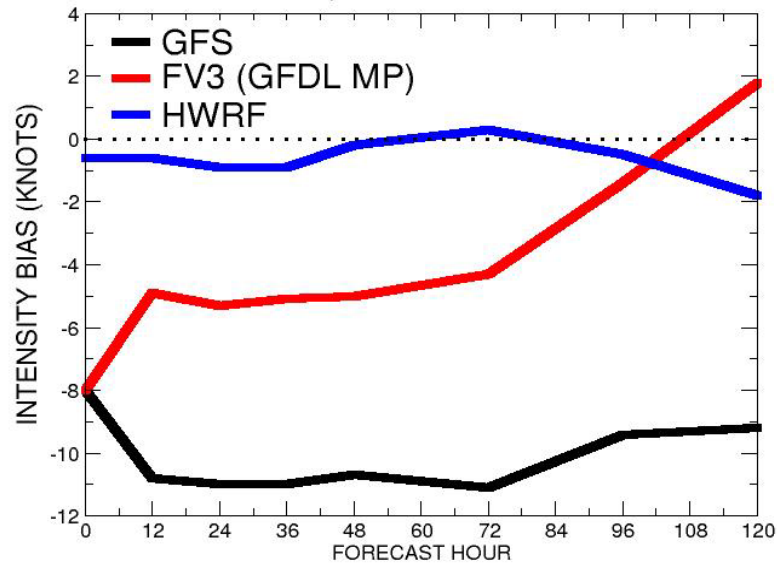

2015 & 2016 ATLANTIC, EAST PACIFIC, WEST PACIFIC
 NUMBER OF CASES: (1337, 1234, 1119, 1012, 905, 711, 560, 429)

Late Model Intensity Bias

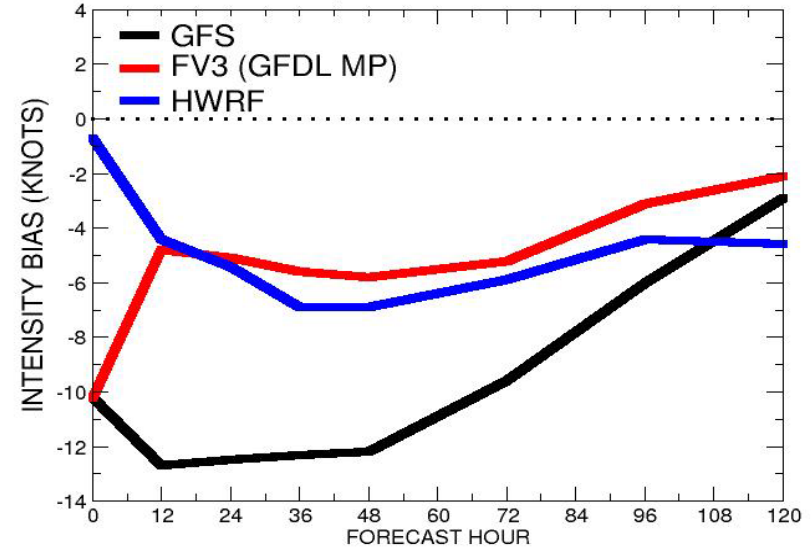

2015 & 2016 ATLANTIC (LATE GUIDANCE)

NUMBER OF CASES: (295, 268, 242, 216, 190, 144, 114, 86)

2015 & 2016 EAST PACIFIC (LATE GUIDANCE)

NUMBER OF CASES: (494, 459, 413, 373, 332, 259, 202, 152)

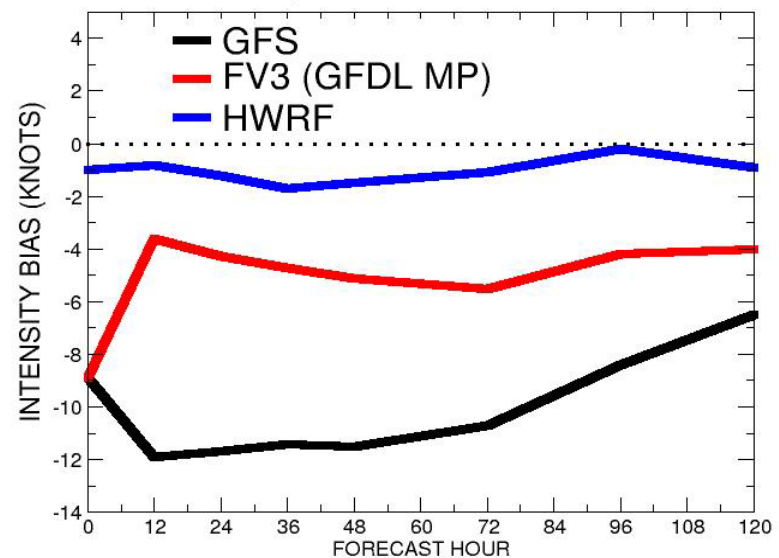

2015 & 2016 WEST PACIFIC (LATE GUIDANCE)

NUMBER OF CASES: (548, 507, 464, 423, 383, 303, 191)

2015 & 2016 ATLANTIC, EAST PACIFIC, WEST PACIFIC

NUMBER OF CASES: (1337, 1234, 1119, 1012, 905, 711, 560, 429)

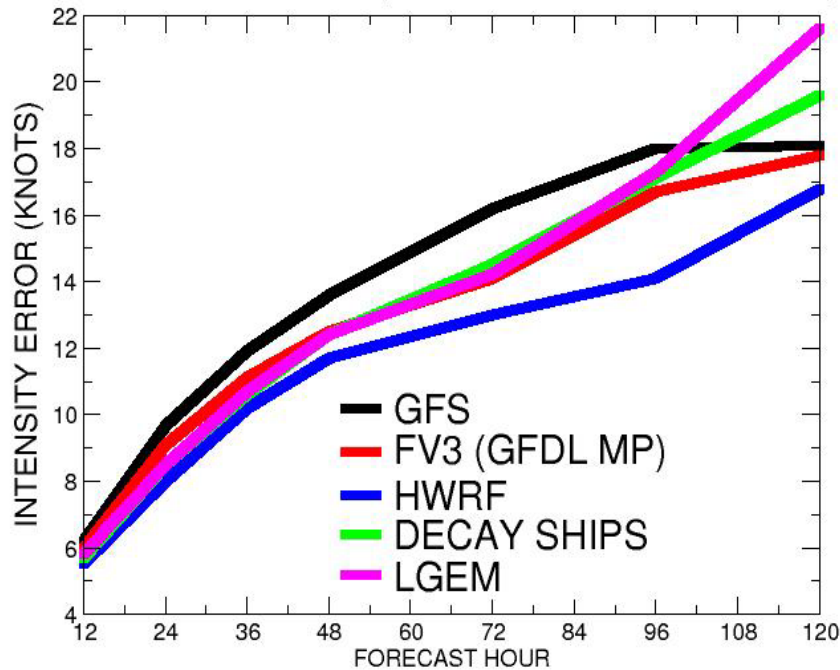

Early Model Intensity Guidance

Atlantic Basin

East Pacific Basin

2015 & 2016 ATLANTIC SEASONS (EARLY GUIDANCE)
NUMBER OF CASES: (266, 242, 216, 191, 142, 108, 84)

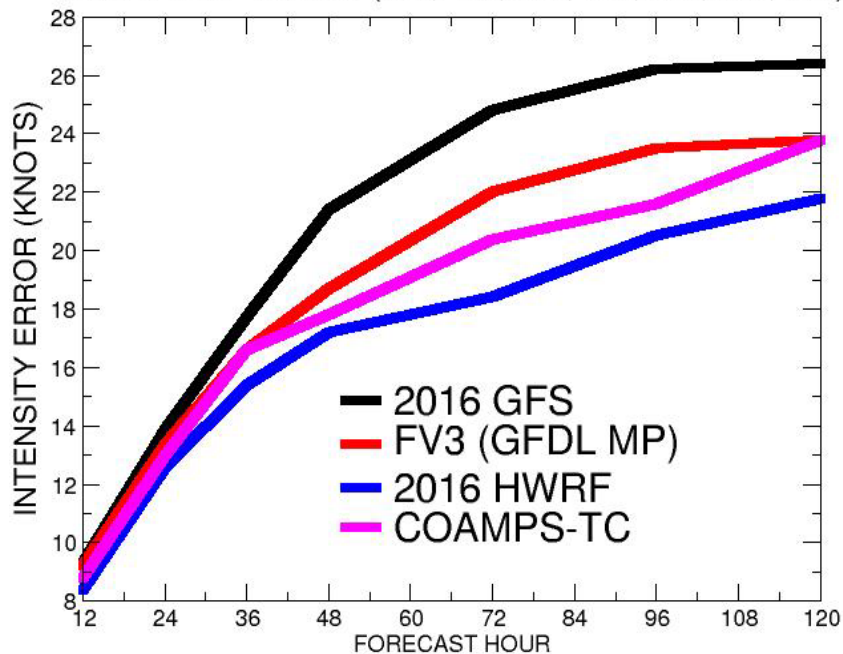

2015 & 2016 EAST PACIFIC SEASONS (EARLY GUIDANCE)
NUMBER OF CASES: (455, 410, 365, 326, 253, 196, 150)

Early Model Intensity Guidance

West Pacific Basin

2015 & 2016 WEST PACIFIC SEASONS (EARLY)
NUMBER OF CASES: (480, 437, 399, 361, 286, 222, 171)

Combined Basins

2015 & 2016 ATLANTIC, EAST PACIFIC, WEST PACIFIC
NUMBER OF CASES: (1203, 1089, 985, 886, 693, 538, 409)

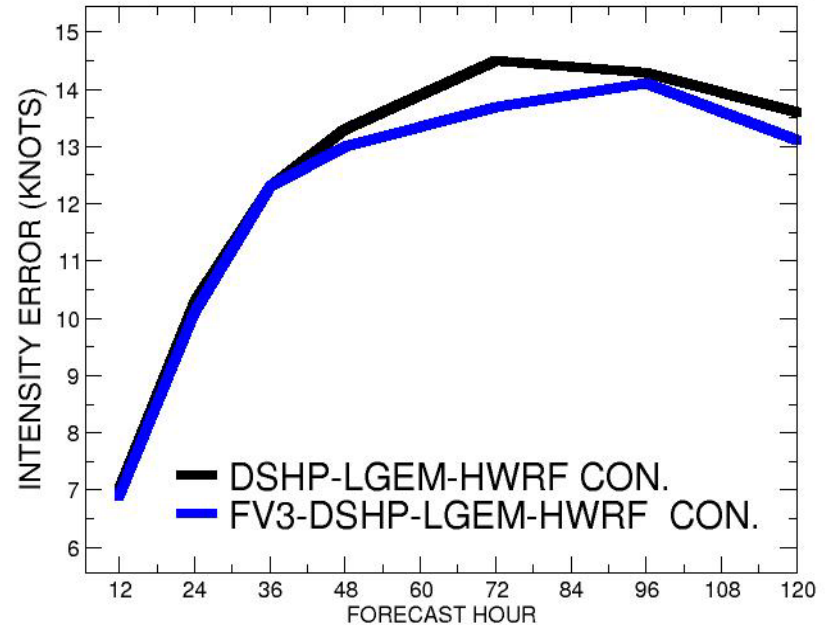

Impact of FV3 Intensity Guidance on Model Consensus

2015 & 2016 ATLANTIC SEASONS (EARLY GUIDANCE)
NUMBER OF CASES: (263, 238, 212, 187, 138, 108, 85)

2015 & 2016 EAST PACIFIC SEASONS (EARLY GUIDANCE)
NUMBER OF CASES: (451, 408, 361, 322, 251, 192, 146)

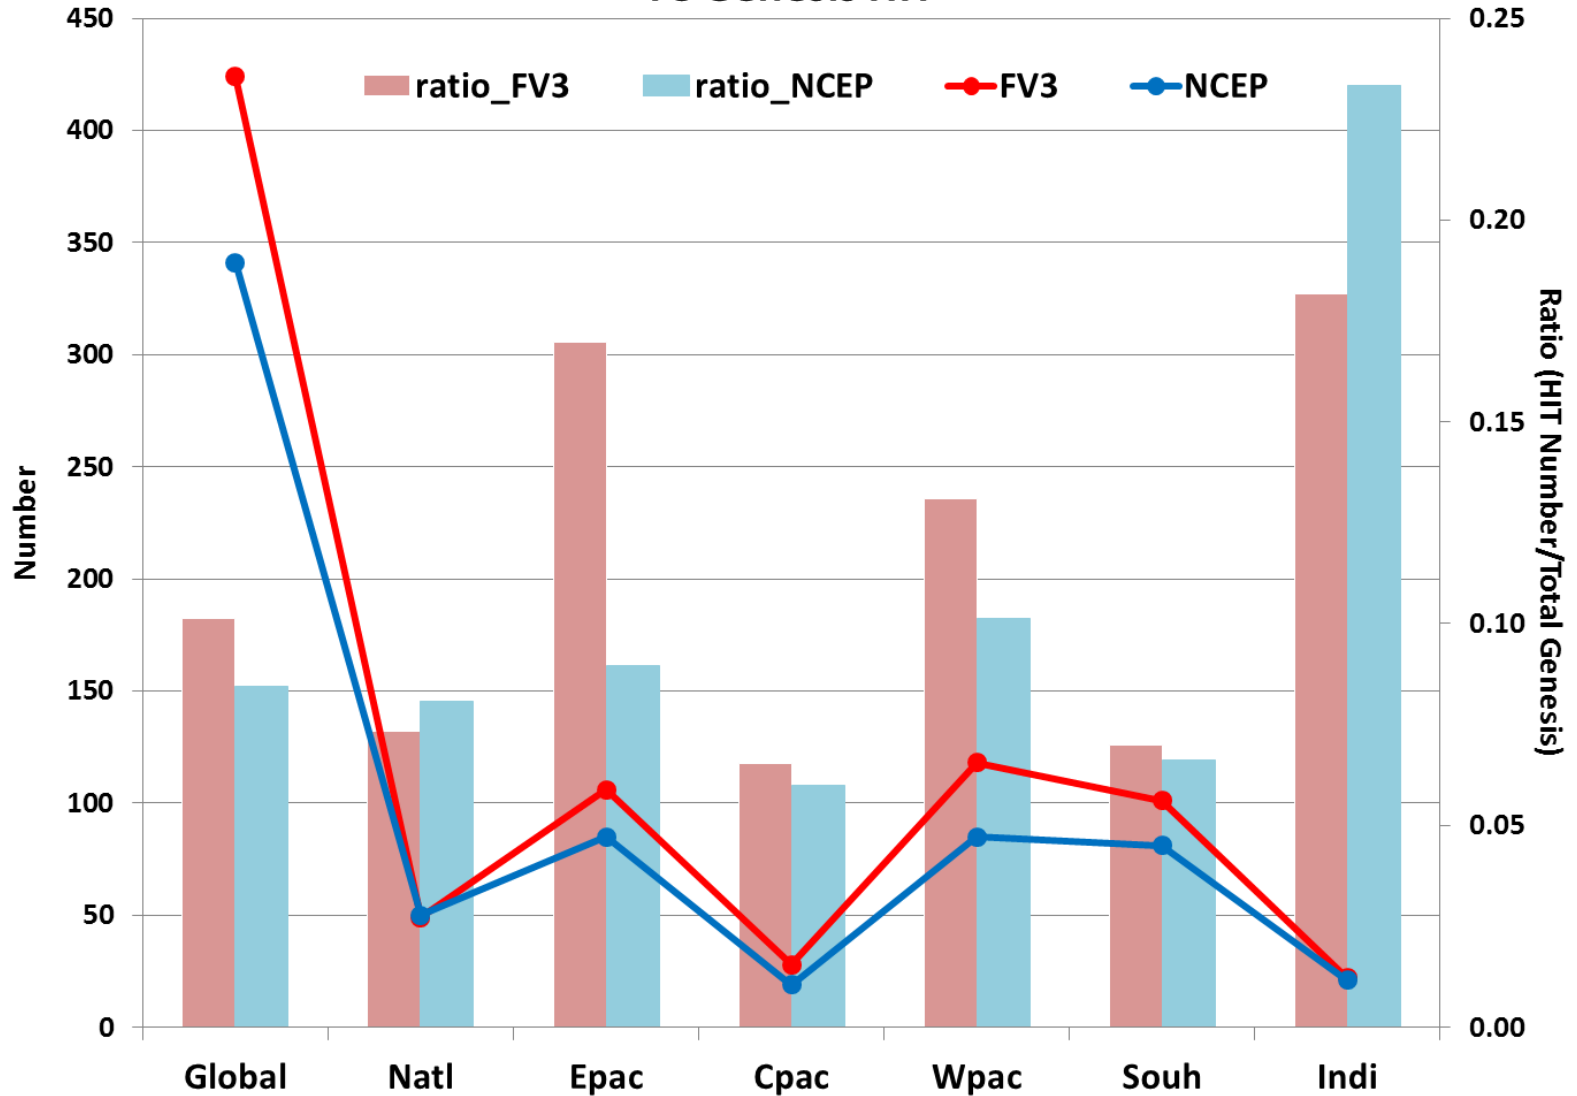

Addition of the FV3 in the DSHP-LGEM-HWRF model consensus reduced intensity errors 11 % in the Atlantic and 5% in the East Pacific at 2-5 day forecast lead times!

How About Storm Genesis?

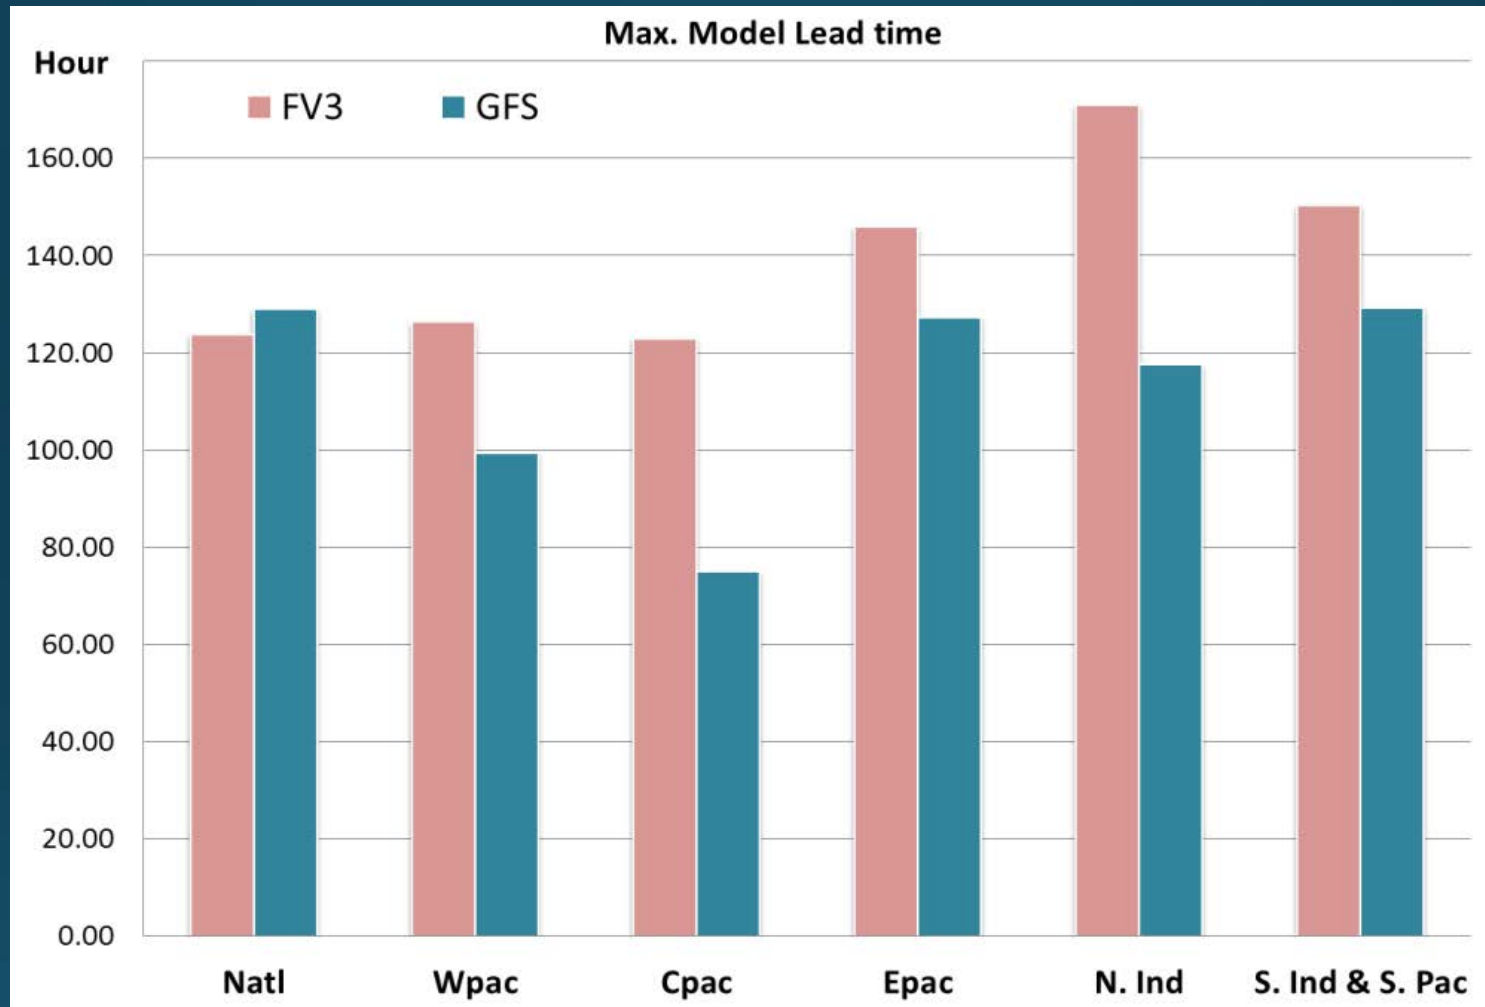

**Preliminary results for 2015
season only**

with Zhao-Carr microphysics

TC Genesis HIT

Lead Time for Storm Genesis

In most basins, the maximum forecast lead time for genesis in FV3 is greater than the GFS.

Conclusions

- **FV3 track guidance is comparable to the GFS in the Atlantic, East Pacific and West Pacific for the 2015-2016 TC seasons.**
- **FV3 intensity guidance is significantly better than the GFS with reduced negative bias and comparable errors to HWRF for late model guidance.**
- **Replacement of the GFS with FV3 in the GFS-ECMWF track model consensus has a neutral impact on track error.**
- **Addition of the FV3 in the DSHP-LGEM-HWRF intensity model consensus significantly improved the intensity guidance by day 2 in the Atlantic (11%) with slight reduction of error in the East Pacific (5%).**
- **The timing of genesis in the FV3 is more consistent with the observed timing of genesis compared to the GFS, with a comparable false alarm rate.**
