- 3) This NOAA Joint Hurricane Testbed project was funded by the US Weather Research Program in NOAA/OAR's Office of Weather and Air Quality.

# Project Overview

## ➤ Two Parallel Algorithms

### ➤ **37 GHz Ring-Only RI Index (RII, yes & no type)**

- During the past funding year, ARCHER2 code (*Wimmer and Velden 2016, JAMC*) has been included for better center fixing & ring detection

### ➤ **Probability-based Microwave Ring RI Index (PMWRing RII)**

- **Task 1:** Collecting historical microwave data from AMSR-E, SSM/I, and SSMIS and calibrating their  $T_B$ 's to be compatible with TMI  $T_B$ 's
- **Task 2:** (CIRA) Generating the SHIPS RI developmental dataset
- **Task 3:** Development of the PMWRing RII for each basin
- **Task 4:** Real-time testing at NHC and JTWC
- **Task 5: Evaluate the real-time testing results and refine the index based on lessons learned.**

# 2016 Real-Time Testing

- Jun 2016 – Dec 2016
- Run for NHC (AL, EP, & CP) and JTWC (WP & IO) basins
- **Problems found during real-time testing in these basins:**
  - **Sample size problem for PMWRing RII development:** We treated each microwave sensor separately to avoid the inter-calibration problem.
  - **SHIPS RII threshold problem for PMWRing RII:** For different RI thresholds (25 kt, 30 kt, 35 kt, and 40 kt), we used the corresponding SHIPS RII>15%. This tends to give increasingly favorable environmental condition threshold for increasing RI thresholds, which is not correct.

## Example RI forecast: Mathew 2016093006

```
ATLANTIC 37 GHz Ring Only and PMWRing RI INDICES
MATTHEW AL14 2016 09/30/16 06 UTC
TMI,SSMI,SSMIS,AMSR2 and WINDSAT Total Overpass Orbits: 2
=====RI FORECAST BY THE 37 GHz Ring only and PMWRing RI INDICES DURING PAST 6 HOURS:
===37 GHz Ring Only RI Forecast:===
FUTURE 24-HOUR INTENSITY INCREASE >= 30 KT (RI): YES
===PMWRing RI Forecast (based on 37 GHz Ring and 5 additional 37/85 GHz predictors):===
PROB OF RI FOR 25 KT RI THRESHOLD= 48%
PROB OF RI FOR 30 KT RI THRESHOLD= 75%
PROB OF RI FOR 35 KT RI THRESHOLD= 100%
PROB OF RI FOR 40 KT RI THRESHOLD= 100%
=====
```

# Solution: Algorithm Refinement

- Combine all microwave sensors for algorithm development:

While sensor data is not inter-calibrated,

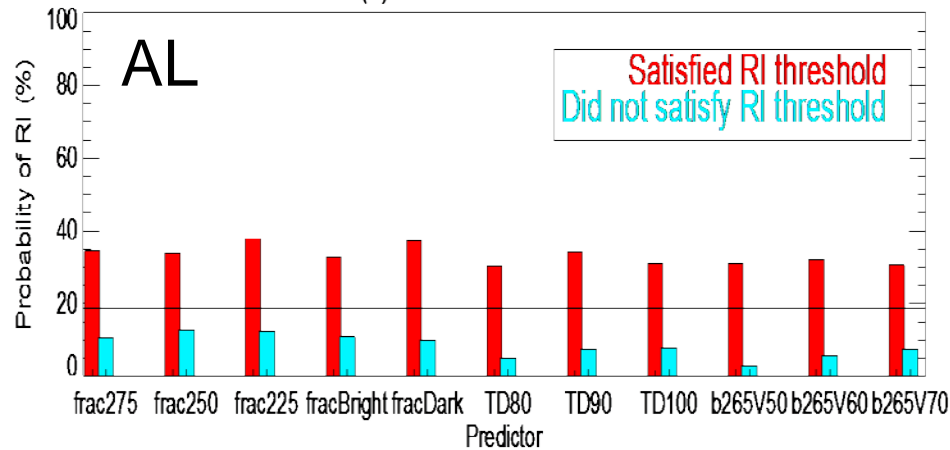

Each sensor is just as likely to detect  $PCT \leq 275$  K, 250K, 225 K as the others.

- Choose SHIPS\_RII\_30kt  $\geq 15\%$  for RI thresholds (25 kt, 30 kt, 35 kt, and 40 kt)

# Developmental Results:

## Probability of RI for predictors satisfying and not satisfying RI threshold (30 kt/day RI; SHIPS\_RII\_30kt $\geq$ 15% )

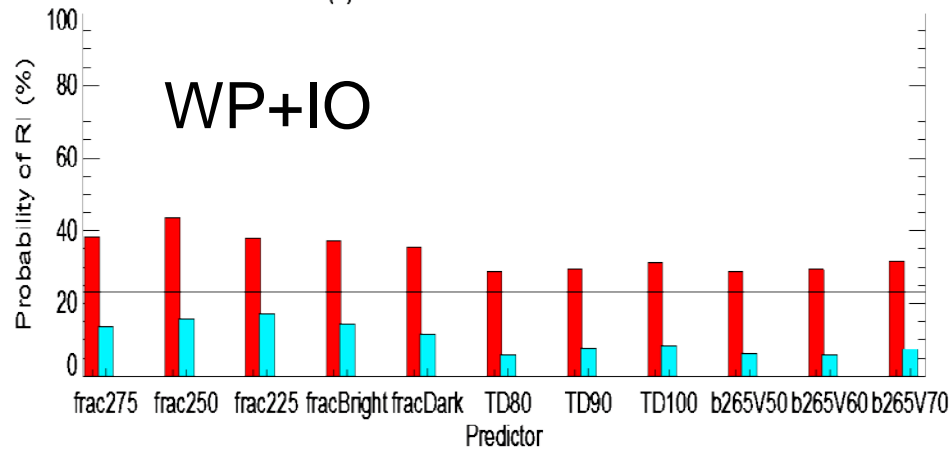

(a) ATL 30kt RI + SHIPS15

(b) EPA 30kt RI + SHIPS15

(c) NWP+NIO 30kt RI + SHIPS15

(d) SH 30kt RI + SHIPS15

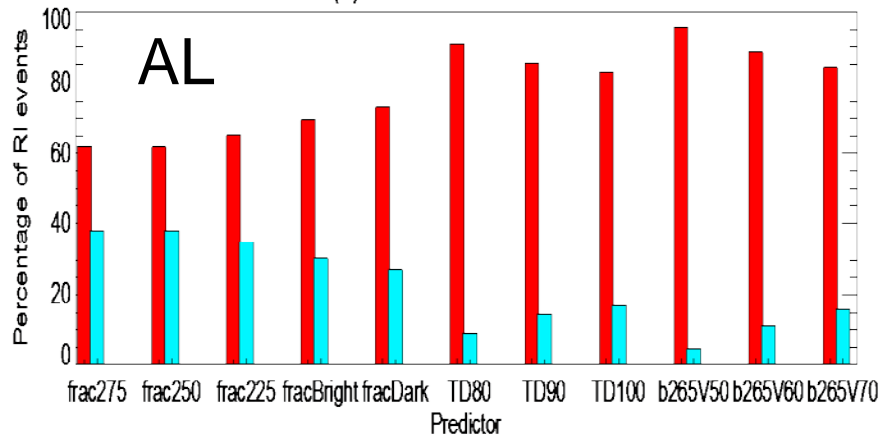

**Solid line shows the climatology mean. All predictors are skillful in each basin. Similar results for 25, 35, 40 kt/day RI categories.**

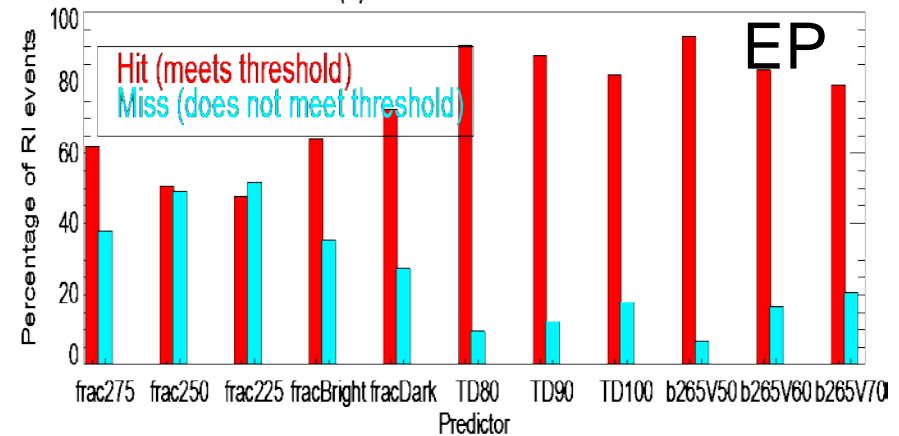

# Developmental Results:

% of Hit (POD, red bar) and % of Miss (FAR, blue bar)  
for 30 kt/day RI; SHIPS\_RII\_30kt  $\geq 15\%$

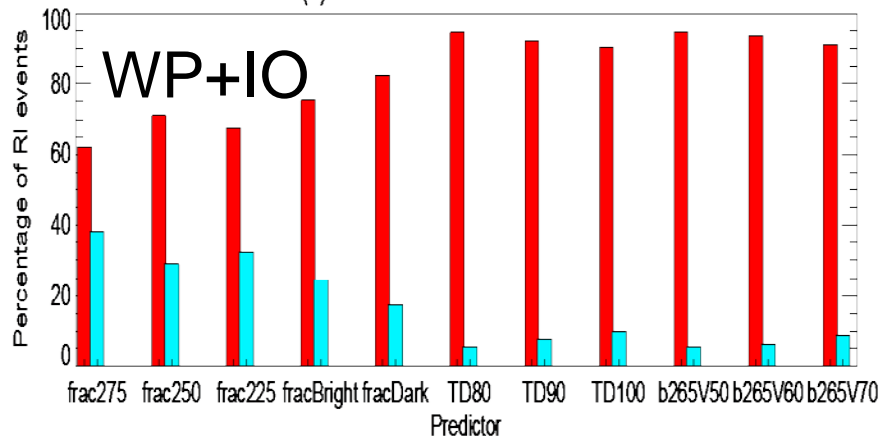

(a) ATL 30kt RI + SHIPS15

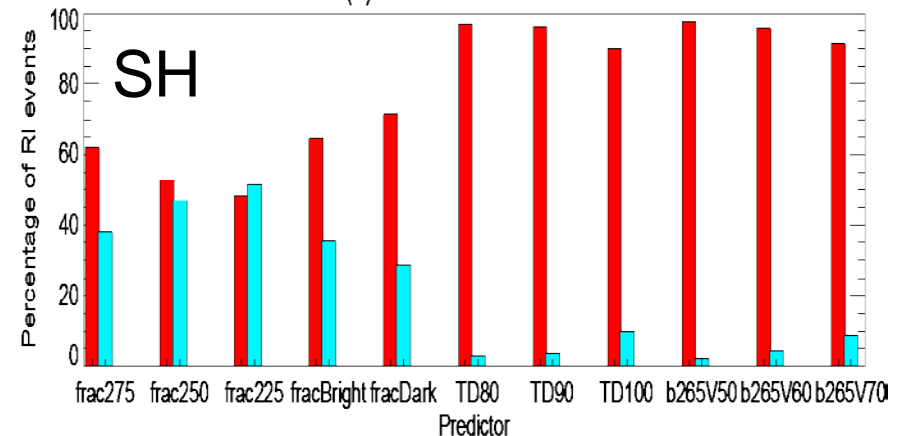

(b) EPA 30kt RI + SHIPS15

(c) NWP+NIO 30kt RI + SHIPS15

(d) SH 30kt RI + SHIPS15

- **POD is higher than FAR for all predictors in all basins, except frac225 in SH.**
- **The ring predictor produces the highest POD (nearly 100%) & lowest FAR (as low as less than 10%) in all basins.**

# 2016 Post-Season Re-run

- **Preliminary Results only: No ARCHER was used for center fixing**

**Mathew 2016093012**

===PMWRing RI Forecast (based on 37 GHz Ring and 5 additional 37/85 GHz predictors):===
PROB OF RI FOR 25 KT RI THRESHOLD= 41%
PROB OF RI FOR 30 KT RI THRESHOLD= 33%
PROB OF RI FOR 35 KT RI THRESHOLD= 25%
PROB OF RI FOR 40 KT RI THRESHOLD= 19%
```

2 AL14 MATTHEW 09-30-2016 06:26 UTC

# Preliminary Results for 2016 Post-Season Re-run: AL

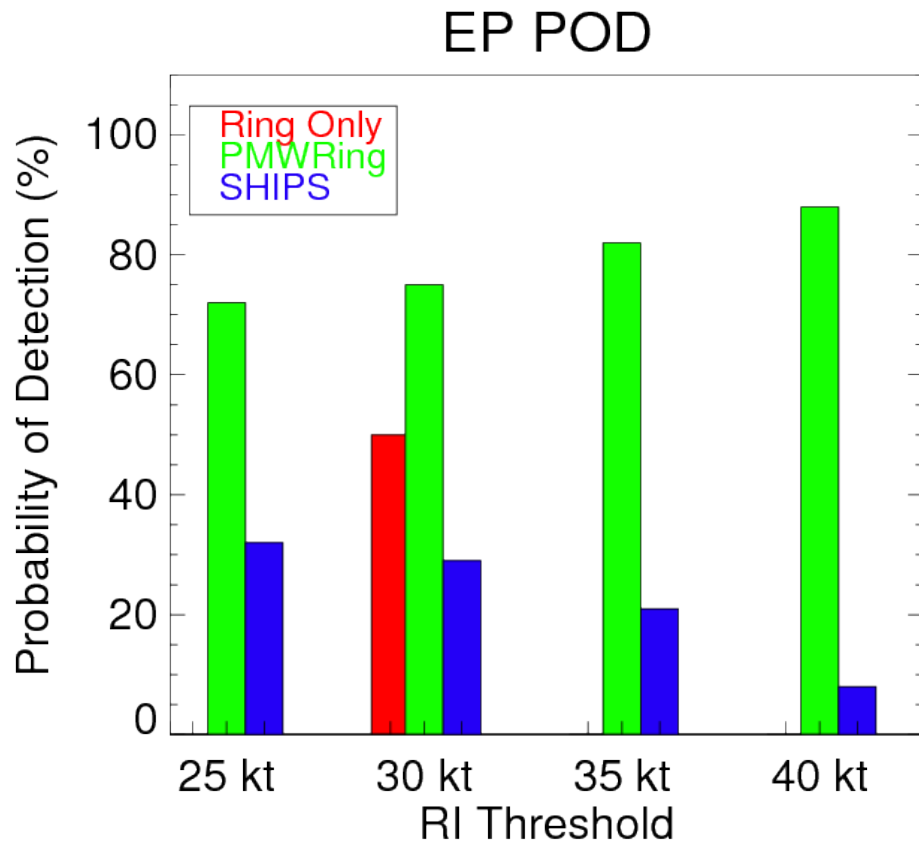

- SHIPS RI thresholds for each basin were based on Kaplan et al. (2010).
- PMWRing RI thresholds were determined similarly as Kaplan et al. (2010).

- AL was tough this year; both ring-only & SHIPS RII had low POD & high FAR
- PMWRing RII was better in POD, but not in FAR

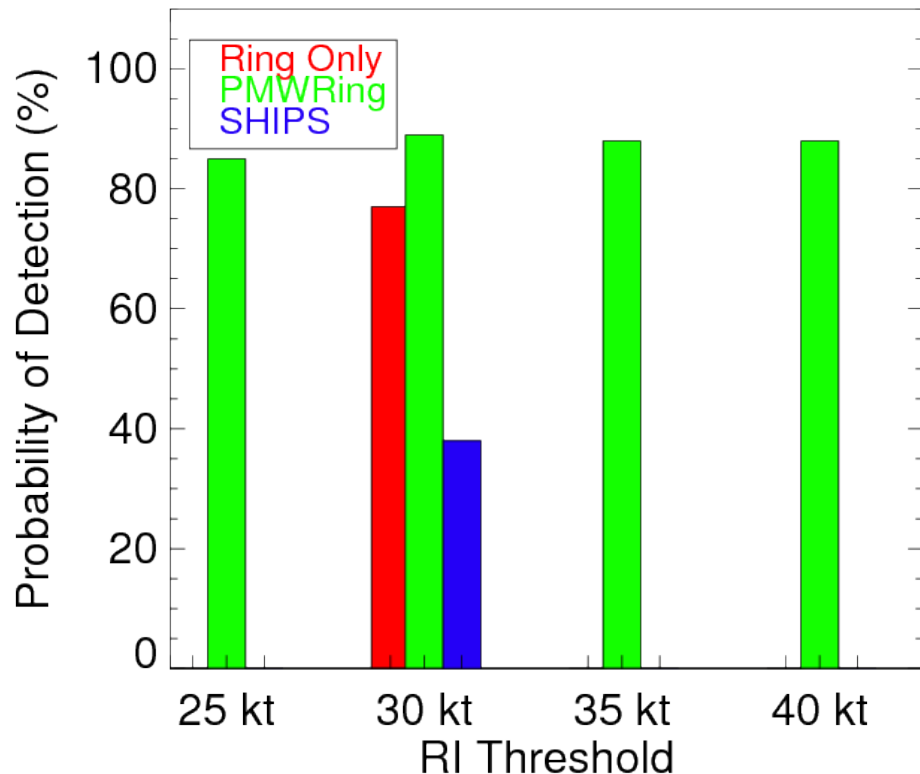

# Preliminary Results for 2016 Post-Season Re-run: EP

- SHIPS RII has low POD & low FAR
- Ring-only and PMWRing RII has high POD, but also higher in FAR

# Preliminary Results for 2016 Post-Season Re-run: WP

WP POD

WP FAR

- Performance in WP was much better
- Both ring-only & PMWRing RII had high POD & lower FAR
- But SHIPS RII had a low POD and a higher FAR

# Summary of Progress and Next-Step Plan

- **PMWRing algorithm refinement is done, preliminary results for 2016 season were promising, especially in WP basin**
- **2016 post-season evaluation needs some more work: adding ARCHER into the code**
- **SH real-time testing in 2017: we just received SHIPS RII developmental data from CIRA a few weeks ago. Will finish the code and start testing in April 2017.**

# **Back-up Slides**

# SHIPS-RII $\geq 10\%$
